

GT COMPANION

Built by the GTs for the GTs

*GT Companion is a learning and knowledge-sharing platform created by Graduate Trainees, for Graduate Trainees. The name reflects its purpose, where **GT** represents the Graduate Trainee community and **Companion** symbolizes a trusted guide throughout the learning journey. The platform brings together training materials and **organizational knowledge** shared by trainers and previous GT batches, helping future trainees build a strong foundation, learn from past experiences, and better understand how projects are delivered at **OwlSure**.*

USER MANUAL

Prepared for: Graduate Trainees & Learning and Development Team

August 2026

GT COMPANION

Built by the GTs for the GTs

1. About GT Companion

GT Companion is a centralized learning and knowledge platform created by **Graduate Trainees, for Graduate Trainees**. It brings together **training materials, project knowledge, and practical insights** shared by trainers, including their real-world experience and guidance on how projects are executed at **Owlsure**. Managed by the Learning & Development (L&D) team, the platform serves as a **single source of knowledge** where future GTs can learn from past training sessions, resources, assignments, and experiences, ensuring valuable knowledge is preserved and passed on across batches.

1.2 Technology Architecture

GT Companion is built on a modern technology stack designed to support learning, knowledge sharing, and long-term knowledge retention for Graduate Trainees. The platform uses **React and TypeScript** to deliver a responsive user experience, while **ASP.NET Core** powers the backend services, a technology intentionally chosen because **.NET was one of the key topics covered during our GT training program**. To enable relevant knowledge retrieval, GT Companion incorporates an AI-powered **RAG service** using **Python FastAPI**, **LangChain**, and **Gemini 3.6 Flash**. The platform is supported by **PostgreSQL with pgvector** for data storage, **Redis** for caching, and **GitHub** with **Railway** for deployment and continuous delivery, ensuring a scalable and reliable learning ecosystem for current and future GT batches.

Figure 1.1 shows the overall technology architecture of the GT Companion platform.

1.3 ER Diagram

The GT Companion database schema is centered around **Users**, **Sessions**, and learning content management. Sessions are organized into **Roadmap Topics**, **Subtopics**, **Study Materials**, **Assignments**, and **Quizzes**, creating a structured learning journey for Graduate Trainees. The schema also supports learner engagement through **progress tracking**, **quiz attempts**, **assignment submissions**, and **personal notes**, while **activity logs**, **session tracking records**, and **material versioning** enable monitoring, auditing, and content management. Together, these entities form a scalable platform that facilitates knowledge sharing, learning assessment, progress monitoring, and long-term preservation of training content for current and future GT batches.

Figure 1.2 shows the overall ER Diagram of the GT Companion platform.

1.4 Video Production Flow

The GT Companion session videos were created by first analyzing the trainer-led sessions, presentation materials, and shared knowledge to ensure all key topics, practical experiences, project-related insights, and OwlSure working practices were accurately captured. Based on this content, detailed scripts were prepared for **nine training sessions**, along with an **overview video** introducing the complete learning journey and a **Leadership Connect video** featuring insights from OwlSure executives. Storyboards and visual content were then designed in **Canva**, supported by assets sourced from platforms such as **Pixabay, Pexels, Unsplash, iStock, and Magnific**. Voice-overs were recorded by **Graduate Trainees** and refined using **Audacity**, while **Google AI Studio** assisted in content refinement and production efficiency. Finally, all visuals, audio, and supporting elements were assembled into polished training videos, creating a structured knowledge repository that preserves valuable learning and experiences for future GT batches.

Video Production Flow

1.4 Getting Started

A single Corporate Login screen serves both roles. A role toggle (Associates / Learning & Development) decides which portal you land in — Associates go to the GT Dashboard; L&D Admins go to the Admin Portal. “Forgot Password?” resets a forgotten password by email; the profile avatar in the header opens Change Password anytime. A persistent header — logo, a portal-status pill (GT Portal / Admin Portal), a User Guide button, and the profile avatar — stays visible on every screen so you always know where you are and can reach help without losing your place.

2. Graduate Trainee Experience

2.1 GT Dashboard — Finding a Learning Track

Logging in as an Associate takes you to the GT Dashboard, your starting point every time. A Featured Videos panel highlights short, spotlighted content (e.g., “Leadership Insights”), while the track catalog below lets you search or filter by track/category and shows a live “Showing X of Y tracks” count. Each track card shows a domain tag and trainer name — select “Open Learning Track” to begin. Only tracks an Administrator has Published appear here.

2.2 Working Through a Track — Session Overview

Opening a track brings you to its Session Overview, the hub you'll return to throughout the track. An embedded walkthrough video covers concepts, expectations, and prerequisites. Below it, a six-tab bar — each with a live item count — organizes everything else:

- **Road Map** — a structured, expandable view of each module and its subtopics, showing the trainer's full coverage plan.
- **Provided Materials** — official docs, PPTs, videos, and notes assigned by L&D, filterable by content type and searchable by title.
- **Additional Materials** — supplementary content contributed by peers and mentors, tagged with a source/contributor and date.
- **Assignments** — hands-on tasks with due dates, points, submission format, instructions, and a status chip (e.g., Pending).
- **Quiz** — a short assessment (title, topic, question count) started on demand and worked one question at a time.
- **Notes** — a private space to save timestamped personal notes, scoped to that track and visible only to you.

The image shows two screenshots of the GT Companion interface. The left screenshot is the GT Dashboard, featuring a 'Knowledge Repository' section with a video player and a 'Featured Videos' section. Below these are search bars and a grid of learning tracks, including '.NET with C#', 'SQL & Relational Database Engineering', and 'Insurance Domain Fundamentals'. The right screenshot shows the 'Session Overview' for a track, displaying an 'Interactive Learning Roadmap' with a list of topics, a 'Provided Study Materials' section with filters for Doc, PPT, Video, and Notes, and a list of materials like 'Enterprise .NET Architecture Handbook' and 'ASP.NET Core Web API Best Practices Deck'.

3. L&D Administrator Experience

3.1 Admin Overview & Session Management

Logging in as L&D lands you in the Admin Portal, with three workspaces on the top navigation bar: Admin Overview, Session Management, and Session Tracker.

- **Admin Overview** — a quick, read-only preview of what's already live — shows only Published sessions with a “View Session” option to check exactly what learners see.
- **Session Management** — the workspace for maintaining curriculum. Filter sessions by status (Published, Draft, Archived), then Edit, Publish, or Delete any session. Select “+ Create New Session” to start a new track.

NOTE: The Publish button disables automatically once a session is already Published, preventing accidental re-publishing.

3.2 Building a Session — the Session Editor

Creating or editing a session opens the same six-tab Session Editor. Every new session starts in Draft Mode so it can be built out fully before anyone sees it. Work across as many tabs as needed, then select “Save All Session Changes” once to commit everything at once:

- **Session Overview** — Title, Description, Category Track, Trainer Name, Session Status (Draft/Published/Archived), and the overview walkthrough video.
- **Road Map** — add topic nodes and subtopic nodes to define the order trainees will work through the material.
- **Provided / Additional Materials** — attach official curriculum files or links, each with a document type, description, and file/URL.
- **Assignments** — define tasks with a name, due date, supporting file, and full instructions.
- **Quiz Builder** — author multiple-choice questions with four options each and mark the correct answer for auto-scoring.

Set Session Status to Published only once the session is genuinely ready — this is what makes it visible on the GT Dashboard and in Admin Overview.

The screenshot displays the GT Companion Admin Portal interface. On the left, the 'Session Management' tab is active, showing a list of sessions under 'Session Content'. The sessions listed are '.NET with C#', 'SQL & Relational Database Engineering', and 'Insurance Domain Fundamentals'. Each session has an 'Edit Session' button and a 'Publish' button. On the right, the 'Create New Learning Session' modal is open, showing the 'Session Overview' tab. This tab includes fields for 'Topic Title', 'Topic Description', and 'Subtopic Nodes'. The 'Topic Title' field contains 'Introduction & Environment Setup', and the 'Topic Description' field contains 'Getting started with tools, runtime, and architecture'. The 'Subtopic Nodes' section shows 'Subtopic #1' with the description 'Runtime Overview & Project Structure'. At the bottom of the modal, there are 'Cancel' and 'Save All Session Changes' buttons.

4. Reporting — the Session Tracker

The Session Tracker is an organization-wide, spreadsheet-style log of every scheduled session instance across all tracks and trainers — distinct from Session Management, which manages curriculum content rather than individual scheduled runs.

- **Filter & Search** — filter records by Session Code, Session Name, Trainer, Schedule Date/Time, or Category, or search Global Keywords for anything in notes or linked URLs.
- **Add / Edit** — select “+ Add Record” to log a new scheduled instance, or the pencil icon to edit an existing one — both open the same form (Session Code, Category, Title, Trainer, Schedule Date/Time, Hours, Remarks).
- **Delete** — remove a record via the trash icon once it's no longer needed for reporting, audits, or reference.
- **Export Excel** — download the currently filtered records to Excel for offline analysis or stakeholder sharing.

4.1 How GT Companion supports L&D

GT Companion addresses the challenges of fragmented onboarding and inconsistent knowledge transfer by providing a centralized, structured, and scalable learning platform. By combining learning content, assessments, practical exercises, and administrative tools within a single system, it enables effective onboarding, preserves organizational knowledge, and creates a consistent learning experience for current and future Graduate Trainee batches.

The screenshot displays the GT Companion interface. At the top, there's a navigation bar with 'GT Companion', 'Admin Portal', and 'User Guide'. Below this, a tabbed interface shows 'Session Tracker', 'Session Management', and 'Admin Overview'. The 'Session Tracker' tab is active, showing a list of sessions with columns: S.NO., SESSION CODE & TITLE, CATEGORY, TRAINER / INSTRUCTOR, SCHEDULE & TIME, SESSION REMARKS, and ACTIONS. Below the list are two modal forms: 'Edit Session Fields' and 'Upload New Session Details'.

Session Tracker Table:

S.NO.	SESSION CODE & TITLE	CATEGORY	TRAINER / INSTRUCTOR	SCHEDULE & TIME	SESSION REMARKS	ACTIONS
1	SESS-SESS10 .NET with C#	.NET with C#	Santhosh Kumar	2026-08-15 10:00 AM - 01:00 PM (12 hrs)	Comprehensive mastery of C# 12, OOP, LINQ, Async/Await, SOLID principles, ASP.NET Core...	[Edit] [Delete]
2	SESS-SESS10 Insurance Domain Fundamentals	Insurance	Harish Mandapuram	2026-08-15 10:00 AM - 01:00 PM (16 hrs)	Essential business domain knowledge covering Life, Property & Casualty (P&C), Underwriting...	[Edit] [Delete]
3	SESS-SESS10 SQL & Relational Database Engineering	SQL	Janani Selvaraj	2026-08-15 10:00 AM - 01:00 PM (24 hrs)	Master PostgreSQL fundamentals: Schemas, Keys, Constraints, CRUD Operations, Joins...	[Edit] [Delete]
4	SESS-SESS10 Campus to Corporate	C2C	Mayford Gomes	2026-08-15 10:00 AM - 01:00 PM (10 hrs)	Accountability, Teamwork, Business Etiquette, Effective Communication, Time Management...	[Edit] [Delete]
5	SESS-SESS10 Data Modelling Fundamentals	Data	Gabriel N Maria Linton	2026-08-15 10:00 AM - 01:00 PM (12 hrs)	Introduction to Data Modeling, Entity Relationships, Cardinality, Keys, Normalization...	[Edit] [Delete]

Edit Session Fields Modal:

Session Code / ID *: SESS-SESS10
 Category / Learning Track *: Frontend (React & Tailwind)
 Session Name / Title *: HTML, CSS & JavaScript
 Trainer / Instructor *: Sre Leka Rajan
 Schedule Date *: 15-08-2026
 Schedule Time *: 10:00 AM - 01:00 PM
 Hrs *: 12
 Session Remarks / Additional Notes: Web Development Fundamentals covering HTML Structure, CSS Styling, Responsive Design, JavaScript Programming, DOM Manipulation, and Asynchronous Programming.

Upload New Session Details Modal:

Session Code / ID *: SESS-GT-286
 Category / Learning Track *: .NET with C#
 Session Name / Title *: e.g. ASP.NET Core Web API & Clean Architecture
 Trainer / Instructor *: e.g. Sarah Jenkins
 Schedule Date *: 11-08-2026
 Schedule Time *: 09:00 AM - 12:00 PM
 Hrs *: 10
 Session Remarks / Additional Notes: Enter any feedback, special prerequisites, or curriculum observations...

5. Quick Reference

5.1 Learner Screens

Screen	Purpose
GT Dashboard	Browse and search the published track catalog; preview featured videos.
Session Overview	Central hub for a track — watch the intro video and reach all six content tabs.
Provided / Additional Materials	Access official and supplementary study resources.
Assignments	View tasks, due dates, points, and submission status.
Quiz	Take a timed assessment, one question at a time.
Notes	Save private, timestamped study notes per track.

5.2 Administrator Screens

Screen	Purpose
Admin Overview	Preview the live (Published) catalog exactly as learners see it.
Session Management	Create, edit, publish, or delete learning tracks.
Session Editor	Build a session's overview, roadmap, materials, assignments, and quiz.
Session Tracker	Log, filter, and export scheduled session instances org-wide.

GT Companion — Built by the GTs for the GTs
