

GT COMPANION

Built by the GTs for the GTs

*GT Companion is a learning and knowledge-sharing platform created by Graduate Trainees, for Graduate Trainees. The name reflects its purpose, where **GT** represents the Graduate Trainee community and **Companion** symbolizes a trusted guide throughout the learning journey. The platform brings together training materials and **organizational knowledge** shared by trainers and previous GT batches, helping future trainees build a strong foundation, learn from past experiences, and better understand how projects are delivered at **OwlSure**.*

USER MANUAL

Prepared for: Graduate Trainees & Learning and Development Team

August 2026

GT COMPANION

Built by the GTs for the GTs

1. About GT Companion

GT Companion is a centralized learning and knowledge platform created **by Graduate Trainees, for Graduate Trainees**. It brings together **training materials, project knowledge, and practical insights** shared by trainers, including their real-world experience and guidance on how projects are executed at **Owlsure**. Managed by the Learning & Development (L&D) team, the platform serves as a **single source of knowledge** where future GTs can learn from past training sessions, resources, assignments, and experiences, ensuring valuable knowledge is preserved and passed on across batches.

1.2 Technology Architecture

GT Companion is built on a modern technology stack designed to support learning, knowledge sharing, and long-term knowledge retention for Graduate Trainees. The platform uses **React and TypeScript** to deliver a responsive user experience, while **ASP.NET Core** powers the backend services, a technology intentionally chosen because **.NET was one of the key topics covered during our GT training program**. To enable relevant knowledge retrieval, GT Companion incorporates an AI-powered **RAG service** using **Python FastAPI**, **LangChain**, and **Gemini 3.6 Flash**. The platform is supported by **PostgreSQL with pgvector** for data storage, **Redis** for caching, and **GitHub** with **Railway** for deployment and continuous delivery, ensuring a scalable and reliable learning ecosystem for current and future GT batches.

Figure 1.1 shows the overall technology architecture of the GT Companion platform.

1.3 ER Diagram

The GT Companion database schema is centered around **Users**, **Sessions**, and learning content management. Sessions are organized into **Roadmap Topics**, **Subtopics**, **Study Materials**, **Assignments**, and **Quizzes**, creating a structured learning journey for Graduate Trainees. The schema also supports learner engagement through **progress tracking**, **quiz attempts**, **assignment submissions**, and **personal notes**, while **activity logs**, **session tracking records**, and **material versioning** enable monitoring, auditing, and content management. Together, these entities form a scalable platform that facilitates knowledge sharing, learning assessment, progress monitoring, and long-term preservation of training content for current and future GT batches.

Figure 1.2 shows the overall ER Diagram of the GT Companion platform.

1.4 Video Production Flow

The GT Companion session videos were created by first analyzing the trainer-led sessions, presentation materials, and shared knowledge to ensure all key topics, practical experiences, project-related insights, and OwlSure working practices were accurately captured. Based on this content, detailed scripts were prepared for **nine training sessions**, along with an **overview video** introducing the complete learning journey and a **Leadership Connect video** featuring insights from OwlSure executives. Storyboards and visual content were then designed in **Canva**, supported by assets sourced from platforms such as **Pixabay, Pexels, Unsplash, iStock, and Magnific**. Voice-overs were recorded by **Graduate Trainees** and refined using **Audacity**, while **Google AI Studio** assisted in content refinement and production efficiency. Finally, all visuals, audio, and supporting elements were assembled into polished training videos, creating a structured knowledge repository that preserves valuable learning and experiences for future GT batches.

Video Production Flow

1.4 Getting Started

A single Corporate Login screen serves both roles. A role toggle (Associates / Learning & Development) decides which portal you land in — Associates go to the GT Dashboard; L&D Admins go to the Admin Portal. “Forgot Password?” resets a forgotten password by email; the profile avatar in the header opens Change Password anytime. A persistent header — logo, a portal-status pill (GT Portal / Admin Portal), a User Guide button, and the profile avatar — stays visible on every screen so you always know where you are and can reach help without losing your place.

2. Graduate Trainee Experience

2.1 GT Dashboard — Finding a Learning Track

Logging in as an Associate takes you to the GT Dashboard, your starting point every time. A Featured Videos panel highlights short, spotlighted content (e.g., “Leadership Insights”), while the track catalog below lets you search or filter by track/category and shows a live “Showing X of Y tracks” count. Each track card shows a domain tag and trainer name — select “Open Learning Track” to begin. Only tracks an Administrator has Published appear here.

2.2 Working Through a Track — Session Overview

Opening a track brings you to its Session Overview, the hub you'll return to throughout the track. An embedded walkthrough video covers concepts, expectations, and prerequisites. Below it, a six-tab bar — each with a live item count — organizes everything else:

- **Road Map** — a structured, expandable view of each module and its subtopics, showing the trainer's full coverage plan.
- **Provided Materials** — official docs, PPTs, videos, and notes assigned by L&D, filterable by content type and searchable by title.
- **Additional Materials** — supplementary content contributed by peers and mentors, tagged with a source/contributor and date.
- **Assignments** — hands-on tasks with due dates, points, submission format, instructions, and a status chip (e.g., Pending).
- **Quiz** — a short assessment (title, topic, question count) started on demand and worked one question at a time.
- **Notes** — a private space to save timestamped personal notes, scoped to that track and visible only to you.

The image shows two screenshots of the GT Companion interface. The left screenshot is the GT Dashboard, featuring a 'Knowledge Repository' section with a video player and a 'Featured Videos' section. Below these are search bars and a grid of learning tracks, including '.NET with C#', 'SQL & Relational Database Engineering', and 'Insurance Domain Fundamentals'. The right screenshot shows the 'Session Overview' for a track, displaying an 'Interactive Learning Roadmap' with a list of topics, a 'Provided Study Materials' section with links to documents and videos, and a list of assignments and quizzes.

3. L&D Administrator Experience

3.1 Admin Overview

Logging in as L&D lands you in the Admin Portal, with three workspaces on the top navigation bar: Admin Overview, Session Management, and Session Tracker.

- **Admin Overview** — a quick, read-only preview of what's already live — shows only Published sessions with a “View Session” option to check exactly what learners see.
- **Session Management** — the workspace for maintaining curriculum. Filter sessions by status (Published, Draft, Archived), then Edit, Publish, or Delete any session. Select “+ Create New Session” to start a new track.

NOTE: The Publish button disables automatically once a session is already Published, preventing accidental re-publishing.

- **Session Tracker**— review scheduled session records, trainer allocations, and upcoming session activity.
- **User Management**— view registered user counts, role-wise distribution (Admin, Employee, Associate), and overall user directory statistics.

3.2 Building a Session — the Session Editor

Creating or editing a session opens the same six-tab Session Editor. Every new session starts in Draft Mode so it can be built out fully before anyone sees it. Work across as many tabs as needed, then select “Save All Session Changes” once to commit everything at once:

- **Session Overview** — Title, Description, Category Track, Trainer Name, Session Status (Draft/Published/Archived), and the overview walkthrough video.
- **Road Map** — add topic nodes and subtopic nodes to define the order trainees will work through the material.
- **Provided / Additional Materials** — attach official curriculum files or links, each with a document type, description, and file/URL.
- **Assignments** — define tasks with a name, due date, supporting file, and full instructions.
- **Quiz Builder** — author multiple-choice questions with four options each and mark the correct answer for auto-scoring.

Set Session Status to Published only once the session is genuinely ready — this is what makes it visible on the GT Dashboard and in Admin Overview.

The screenshot displays the GT Companion Admin Portal. The top navigation bar includes 'Session Tracker', 'Session Management' (active), and 'Admin Overview'. The 'Session Content' section shows a list of sessions with filters for 'ALL', 'Published', 'Draft', and 'Archived'. Three sessions are listed: '.NET with C#' (Trainer: Santhosh, Published), 'SQL & Relational Database Engineering' (Trainer: Janaki, Published), and 'Insurance Domain Fundamentals' (Trainer: Mariah, Published). Each session has 'Edit Session' and 'Publish' buttons.

The 'Create New Learning Session' modal is open, showing the 'Road Map (1)' tab. It includes fields for 'Topic Title' (Introduction & Environment Setup), 'Topic Description' (Getting started with tools, runtime, and architecture), and 'Subtopic Nodes (1)' (Runtime Overview & Project Structure). The modal also has buttons for 'Add New Topic Node', 'Remove Topic Node', 'Delete Subtopic', and 'Save All Session Changes'.

3.3. Reporting — the Session Tracker

The Session Tracker is an organization-wide, spreadsheet-style log of every scheduled session instance across all tracks and trainers — distinct from Session Management, which manages curriculum content rather than individual scheduled runs.

- **Filter & Search** — filter records by Session Code, Session Name, Trainer, Schedule Date/Time, or Category, or search Global Keywords for anything in notes or linked URLs.
- **Add / Edit** — select “+ Add Record” to log a new scheduled instance, or the pencil icon to edit an existing one — both open the same form (Session Code, Category, Title, Trainer, Schedule Date/Time, Hours, Remarks).
- **Delete** — remove a record via the trash icon once it's no longer needed for reporting, audits, or reference.
- **Export Excel** — download the currently filtered records to Excel for offline analysis or stakeholder sharing.

The screenshot displays the GT Companion interface with the Session Tracker module active. The top navigation bar includes the GT Companion logo, an Admin Portal link, a User Guide link, and a user profile icon. The Session Tracker section shows 9 of 9 total records. Below the filter section, a table lists session details with columns for S.No., Session Code & Title, Category, Trainer / Instructor, Schedule & Time, Session Remarks, and Actions. The table contains five rows of session data. Below the table, there are two modal forms: 'Edit Session Fields' and 'Upload New Session Details'. Both forms include fields for Session Code / ID, Category / Learning Track, Session Name / Title, Trainer / Instructor, Schedule Date, Schedule Time, Hrs, and Session Remarks / Additional Notes. The 'Edit Session Fields' modal is pre-filled with data from the first row of the table. The 'Upload New Session Details' modal is empty.

S.No.	SESSION CODE & TITLE	CATEGORY	TRAINER / INSTRUCTOR	SCHEDULE & TIME	SESSION REMARKS	ACTIONS
1	SESS-SESS10 .NET with C#	.NET with C#	Santhosh Kumar	2026-08-15 10:00 AM - 01:00 PM (32 hrs)	Comprehensive mastery of C# 12, OOP, LINQ, Async/Await, SOLID principles, ASP.NET Core...

3.4. User Management — Directory & Authentication

The **User Management** module serves as a centralized directory for managing user accounts, roles, designations, and access credentials across the platform.

- **Search & Filter** — find users by Name, VAM ID, Phone Number, Email ID, Role, or Designation.
- **Add Credential** — create a new user account with employee details, role, and login credentials.
- **Edit User Details** — use the **pencil icon** to update user information, roles, or designations.
- **Role Management** — assign roles such as **Admin**, **Employee**, or **Associate** to control access permissions.
- **Delete User** — remove user accounts using the **trash icon** when no longer required.
- **Export Excel** — download filtered user records for reporting, audits, or stakeholder sharing.

3.4 How GT Companion supports L&D

GT Companion addresses the challenges of fragmented onboarding and inconsistent knowledge transfer by providing a centralized, structured, and scalable learning platform. By combining learning content, assessments, practical exercises, and administrative tools within a single system, it enables effective onboarding, preserves organizational knowledge, and creates a consistent learning experience for current and future Graduate Trainee batches.

5. Quick Reference

5.1 Learner Screens

Screen	Purpose
GT Dashboard	Browse and search the published track catalog; preview featured videos.
Session Overview	Central hub for a track — watch the intro video and reach all six content tabs.
Provided / Additional Materials	Access official and supplementary study resources.
Assignments	View tasks, due dates, points, and submission status.
Quiz	Take a timed assessment, one question at a time.
Notes	Save private, timestamped study notes per track.

5.2 Administrator Screens

Screen	Purpose
Admin Overview	Preview the live (Published) catalog exactly as learners see it.
Session Management	Build a session's overview, roadmap, materials, assignments, and quiz.
User Management	View user count, role distribution, and directory statistics.
Session Tracker	Log, filter, and export scheduled session instances organization wide.

GT Companion — Built by the GTs for the GTs
